# PlusDocs: your medical practice for healthy coexistence

As a medical practice, our primary goal is to help and support you. We achieve this through close co-operation and the individual strengths of our team. We have made it our mission to provide you with comprehensive advice, treatment and support. To do this, it is important for us to see the person behind the illness.

In addition to general medicine, our group practice also specialises in functional pain therapy, sports medicine and cardiology.

# We offer you private consultations

Our private consultation hours are an additional offer for all patients! This allows us to take even more time for you and offer you more services and treatment methods. For patients with statutory health insurance it is important to know that this is a medical consultation and, if necessary, an examination, which is not covered by statutory health insurance.

## Our most important services at a glance

- + **Broad knowledge in general medicine and your main hub within the German health care system**
- + **Close contact with clinics, specialist practices and associations**
- + **Internal case conferences to pool and share knowledge**
